## SUMMARY

The Housing and Population Monitoring Report concluded that:

- From 1980 to 1982, the population of Hamilton-Wentworth increased by 4,140 (1.0%) to a total of 414,643.
- There have been 1,815 housing unit completions in Hamilton-Wentworth during 1983. This is an increase of 639 units over the 1982 level.
- There were only 188 new apartment units constructed in 1983. The Regional Housing Statement specifies an annual target of 1,044 apartment units.
- The cost of rental accommodation and lower market housing in Hamilton-Wentworth is generally less than in other major urban centres in Ontario.
- The vacancy rate for apartment units in the Hamilton-Wentworth area decreased to 0.8% by October, 1983.
- As of December 31, 1983, there were 8,944 vacant lots available for single family, semi-detached, row and apartment units in registered and draft approved plans of subdivision. This is considered to be an adequate supply.
- The end of additional funding for the Ontario Home Renewal Program has resulted in a decrease in the availability of home renewal assistance.
- The majority of new assisted housing in Hamilton-Wentworth is being provided from the private non-profit program. In 1983, a net total of 356 units were added to the assisted housing inventory. A total of 53 former rent supplement units were withdrawn from the program.

## 1.0 INTRODUCTION

On April 6, 1982, Hamilton-Wentworth adopted a comprehensive update of the Region's Housing requirements.

This update specified an annual target of 2,900 residential units with a mix of:

single family	1,508	52%
semi-detached	145	5%
rows	203	7%
apartments	1,044	36%

The update also recognized the need for the production of assisted family units, encouraging the rehabilitation of existing housing stock, as well as to continue monitoring the housing field.

This is the ninth monitoring report presented to the Planning and Development Committee and covers the period of January 1, 1983 to December 31, 1983. The purpose of this report is to examine the housing market in 1983 and to evaluate its performance in light of Regional housing policies. In addition to the housing information, population and household characteristics are also examined.

Due to a change in Ministry of Revenue policies, population information will only be available in election years. Therefore, the latest population information available was collected in 1982. New population information will be available in 1985 and will be reported in the 1985 Housing and Population Monitoring Report.

## 2.0 POPULATION AND HOUSEHOLDS

In past years, population and household information for Hamilton-Wentworth was taken from annual reports produced by the Ministry of Revenue, Assessment Services Division. However, due to Ministry policies, population information will now only be collected during those years in which a municipal election occurs. Population information will not be available until the next municipal elections in 1985.

However, certain trends noted in the 1982 Housing and Population Monitoring Report are expected to have continued in 1983.

### 2.1 Population

The last known population figure for Hamilton-Wentworth was 414,643 in 1982. This was an increase of 4,140 (1.0%) over 1980 levels. Population growth in Hamilton-Wentworth has been modest in recent years. Recently, the trend of a declining rate of natural increase (births-deaths) has reversed and an increase in the rate has occurred. However, this rise in the rate of natural increase will probably not be sustained as it is likely due to the movement of the majority of the "baby-boom" generation into the peak child bearing age. When this "bulge" in the population passes the child bearing age there will likely be a decline in the rate of natural increase. Hamilton-Wentworth has continued to experience a net loss of population due to migration out of the Region. Past trends indicate continued growth in the 25-34 age group which has a high tendency to form new households, as well in the over 55 age group.

### 2.3 Conclusions - Population and Households

Although 1983 population figures are unavailable, recent trends in population and household characteristics indicate a continued demand for a variety of housing units. During those future years in which population and household information is available, a detailed examination of trends will be undertaken in the annual monitoring reports.

### 3.0 HOUSING PRODUCTION

#### 3.1 Housing Production by Type

The average annual housing production target for Hamilton-Wentworth is 2,900 housing units, as established by Council in April, 1982. Table 3.1 shows the estimated required mix of these new units.

As shown in Figure 3.1, a total of 1,815 new housing units became available for occupancy in 1983. This is a significant increase in housing production over the 1,176 units completed in 1982.

Figure 3.1

Source: Canada Mortgage and Housing Corporation

Table 3.1

1983 PRODUCTION OF HOUSING UNITSHAMILTON-WENTWORTH

<u>Estimated Annual Unit Type</u>	<u>New Housing Units Target</u>	<u>Total Completed in 1983</u>	<u>Completed Jan.-June 1983</u>	<u>Completed July-Dec. 1983</u>
Single Family	1,508 (52%)	1,332 (62%)	451	881
Semi-detached	145 (5%)	46 (3%)	8	38
Row	203 (7%)	249 (14%)	144	105
<u>Apartment</u>	<u>1,044 (36%)</u>	<u>188 (10%)</u>	<u>120</u>	<u>68</u>
Total	2,900 (100%)	1,815 (100%)	723	1,092

Source: Canada Mortgage and Housing Corporation

As shown in Table 3.1, the production of housing units in 1983 was close to the targets set except for apartment units. (It should also be noted that 1983 marked the first annual increase in housing completions since 1978). Rent controls, relatively low rents and uncertain interest rates have contributed to the low number of apartment completions.

### 3.2 Existing Housing Stock

The estimated 1983 inventory of housing units in Hamilton-Wentworth is shown in Table 3.2. The Table shows that Dundas, Hamilton and Stoney Creek offer a complete range of housing types, while the other Area Municipalities contain mainly single family homes.

REGIONAL HOUSING DISTRIBUTION - 1983\*

MUNICIPALITY	SINGLES		SEMIS		ROW		APARTMENTS		OTHER		TOTAL
ANCASTER	4,762	96%	39	0%	64	1%	76	2%	37	0%	4,978

\*Estimated

Source: Wentworth Regional Assessment, Ministry of Revenue

### 3.3 Conclusions - Housing Production

In 1983, the production of new residential units was 37% less than the housing targets. In particular, the construction of apartment units has been substantially below the estimated requirements. However, the increase in housing completions in 1983 is encouraging and is the first increase since 1978.

#### 4.0 RESIDENTIAL LOT INVENTORY

The majority of residential land available for development, particularly for single family and semi-detached homes, is within plans of subdivision, although there is additional potential for residential development via severances. In most cases, the construction of row and apartment units occurs on existing blocks of lands where appropriate Official Plan designations and zonings are in place. These lands are not part of this inventory due to the lack of available information. Significant opportunity for this type of development presently exists in the Region.

##### 4.1 Plans of Subdivision

Plans of subdivision go through a three stage process before they are ready to be developed. The plans are submitted for consideration, then draft approved with conditions, and are finally registered when conditions are met.

As shown in Table 4.1, during 1983 there were a total of 900 lots registered in plans of subdivision, of which 712 (79%) were lots for singles. No registrations were recorded for row and apartment type units in blocks within plans of subdivision.

Table 4.1

Total	900/286/614	1,721/244/1,477	789

Source: Hamilton-Wentworth Planning and Development Department,  
Development Division

\*As Of December 31, 1983

As shown in Table 4.2, as of December 31, 1983, there were a total of 6,696 lots in all draft approved plans of subdivision compared to 5,602 in December 31, 1982. During 1983, 1,721 lots were draft approved compared to 789 lots in 1982.

There was a total of 2,442 lots in all plans of subdivision under consideration as of December 31, 1983 compared to 3,040 lots in December 31, 1982.

#### 4.2 Vacant Lots in Registered Plans

A number of changes have been made to the base of the vacant lot inventory that has been reported in previous years. The figures shown in Table 4.2 should be more accurate than the figures previously reported. Therefore, vacant lots figures shown in this report should not be compared to the figures shown in previous years.

Table 4.2 shows that, based on the target of a three year short term supply, there is an adequate supply of vacant lots existing within the Region. Although it appears that there is a shortfall of vacant land for apartment construction, sufficient land exists in lands outside of newly registered or submitted plans.

There is an excess supply of lots for semi-detached and row units in the Region. Compared to the targets, there is a seven year supply of lots for semis and row units.

Table 4.2

#### VACANT LOTS AND UNITS IN BLOCKS IN PLANS OF SUBDIVISION

AS OF DECEMBER 31, 1983

Source: Hamilton-Wentworth Planning and Development Department.

\* Note - Only includes lands available in plans of subdivision. Sufficient other lands exist elsewhere.

As of December 31, 1983 there were a total of 2,248 vacant lots within registered plans of subdivision, of which 84% were for singles and semis. As shown in Table 4.3, the majority of lots are developed within five years of registration.

#### 4.3 Severances

During 1983, there were 263 lots created through severances. Table A.14 in the Appendix shows the historical number of severances by area municipality. The number of severances granted in the past two years has been significantly higher than previous years.

#### 4.4 Conclusions - Residential Lot Inventory

As of December 31, 1983, there is a potential for 8,944 units available for single family, semi-detached and row homes, and apartments in the Region in vacant registered and draft approved plans of subdivision. In light of the newly established housing targets, this is three years supply of lots (units). There is approximately a four year supply of lots available for units other than apartments.

The number of lots for semi-detached and row dwellings is considerably higher than estimated requirements.

Based on the average number of dwelling unit completions over the last five years (1,401), there is a six year supply of lots available.

## 5.0 HOUSING COSTS

Although actual housing costs have only experienced minimal increases, the cost of home ownership has become unstable due to changes in mortgage rates.

### 5.1 House Prices

Tables 5.1 and 5.2 compare the prices of homes in Hamilton-Wentworth with other Ontario municipalities. The average market value of two sample houses are used as examples.

House 1 is a three bedroom, brick bungalow, of 1,200 square feet and is located on a 5,500 square foot serviced lot. House 1 rose \$3,000 (4.8%) from 1982 to 1983, less than the average price increase of the sampled municipalities during the same period.

Table 5.1

COMPARISON OF HOUSING PRICES IN  
HAMILTON-WENTWORTH AND OTHER REGIONS

REGION OR COUNTY	SAMPLE MUNICIPALITY	1981 HOUSE 1		1982 HOUSE 1		1983 HOUSE 1		% INCREASE (DECREASE) 1981-1983

AVERAGE		116,200		112,317		123,622		6.4%

Source: Royal Trust, Survey of House Prices, January 1983 & 1984.

In general, the Hamilton market had strong price increases in 1983, although at a lower rate than other areas. This is due to the other municipalities recovering from price declines in 1982. The price declines did not occur in Hamilton in 1982. From 1981 to 1983, housing prices in Hamilton rose at a higher than average rate when compared to other Ontario municipalities.

## 5.2 Home Ownership Costs

Relatively stable mortgage rates over the study period (January-December, 1983) resulted in more predictable and consistent home ownership costs.

Based on the July 1983 cost, a 15% down payment, a mortgage rate of 12.5%\* amortized over 25 years and taxes of \$1,100 a year for house one and \$1,400 for house two; the monthly carrying costs were \$676 for house one and \$1,062 for house two.

By December 1983, based on an interest rate of 11.8%\* and annual taxes of \$1,160 on house one and \$1,480 on house two. The carrying cost of house one declined to \$670 a month. The carrying cost of house two declined to \$1,045.

## 5.3 Conclusions - Housing Costs

Compared to the sampled municipalities house prices in Hamilton-Wentworth are relatively inexpensive. In addition, prices in Hamilton-Wentworth have increased at a lower rate than most other sampled areas. Lower mortgage rates in 1983 have significantly decreased the costs of home ownership in comparison to 1982.

\* Canada Mortgage and Housing Corporation

## 6.0 HOUSING RENEWAL

The rehabilitation of existing housing offers opportunities to strengthen the quality of the Region's housing stock. This is a cost effective and energy efficient method of providing accommodation. Rehabilitation also offers home owners the opportunity to improve the value of their own homes.

### 6.1 Housing Renewal Programs

There are several assistance programs available for home owners who want to upgrade their homes or undertake maintenance required to meet health and safety standards:

- In the past the majority of funding for housing renewal has come from the Ontario Home Renewal Program (O.H.R.P.) which offers loans and/or grants to homeowners in order to rehabilitate their homes up to the levels specified in the property standards by-law.

In 1983, the province withdrew funding from the program, and has announced that funding will not be provided in 1984. Municipalities can continue to administer the program from funds received from loan repayments made in previous years. As shown in Table 6.1 due to these changes all municipalities in the Region have granted fewer loans in 1983 than in 1982.

- In 1983, 219 housing units in the City of Hamilton received funds totalling \$1,081,079 under the (R.R.A.P.) Federal, Residential Rehabilitation Assistance Program. This is an increase of 67 units over the 1982 figures.
- The City of Hamilton currently operates the Hamilton Rehabilitation Program (H.R.P.). During 1983, 9 homeowners received loans totalling \$41,432 under the program.
- A number of other programs providing housing renewal assistance also exist. They include:
  - The Hamilton Handicapped Program in the City of Hamilton, designed to provide loans and grants for the adoption of housing units for the physically disabled.
  - Various programs under the Building Rehabilitation and Improvement Campaign which provides funds for the rehabilitation and restoration of buildings with historical and/or architectural merit.

- Two demonstration projects made available to only four municipalities in Ontario (including Hamilton), Add-A-Unit is designed to provide funds for the conversion of single family housing into legal duplexes. Conserve-A-Unit provides funds for the rehabilitation of apartment units.

- The Convert-to-Rent Program is open to all municipalities and offers funds to assist owners to convert non-residential properties into rental residential units.

## 6.2 Private Housing Renewal Initiatives

Table 6.2 shows the number and value of building permits issued by municipality for housing renewal. It should be noted that only those renewal initiatives requiring the issuance of a building permit are listed in the Table. Many other renewal initiatives are made that do not require the issuance of a building permit. (It should be noted that renewals reserving assistance under the previously listed renewal assistance programs are also recorded in Table 6.2.)

TABLE 6.2

Source: Area Municipalities, Building Departments

## 6.3 Conclusions - Housing Renewal

With the withdrawal of funding from the O.H.R.P., opportunities for housing renewal assistance in the Region have declined. The area municipalities should be urged to take full advantage of the remaining programs that provide renewal assistance.

## 7.0 THE RENTAL HOUSING SECTOR

In 1983, 150 rental apartment units were completed in the Region compared to 162 in 1982. A total of 238 rental row housing units were completed in 1983 compared to 319 in 1982.

### 7.1 Rental Housing Vacancy Rates

As of October 1983, the vacancy rate for apartments in buildings with six or more units in the Hamilton Census Metropolitan Area was 0.8%. (Figure 7.1). The rise in vacancy rates in April 1983 has not been sustained, possibly due to the ending of government programs to stimulate the construction of privately owned units.

Figure 7.1

Source: Canada Mortgage and Housing Corporation, Apartment Vacancy Surveys, April & October, 1983.

As shown in Table A.15 in the appendix, in October of 1983 vacancy rates in all of the area municipalities were low. All municipalities had a vacancy rate of one percent or less.

Table 7.4 shows that the vacancy rate for units in row housing in the Region was also low (0.9%).

## 7.2 Cost of Rental Accommodation

Table 7.1 shows the average rent paid for various apartment units in Hamilton-Wentworth.

Table 7.1

<u>AVERAGE APARTMENT RENTS</u>

Rental Apartment Vacancy Surveys, (1981, 1982-October)

\*\*Factored to produce an annual increase.

The rental increases in 1983 were generally in line with the rate increase permitted by rent control legislation (6%) except for bachelor units.

However, they were above the 4.5% rate of the change in the consumer price index during 1983, as well as above the 4.5% rise in the housing component of the C.P.I. and the 5.6% increase in the rental accommodation component of the C.P.I.

Table 7.2 shows rental rates for two bedroom apartments by municipality. The table shows that two bedroom units in Dundas have continued to be the most expensive in the Region and that Dundas has also experienced the largest increase in rental rates.

Table 7.3 compares the rental costs of a two bedroom apartment in Hamilton-Wentworth with other Ontario Municipalities. The table clearly shows that rental accommodation in Hamilton is less expensive than in other major urban centres in Ontario.

Table 7.4 shows the average rent for row house units in the Region in October 1983. The rental cost of row housing is relatively low, although this may be due to the large inventory of assisted row units. (Since this is the first time that row housing information has been available information on rental price changes is not available.)

### 7.3 Condominium Conversions

On September 6, 1983, Regional Council adopted Amendment No. 6 to the Official Plan of the Hamilton-Wentworth Planning Area. The amendment added the following policies to the Regional Official Plan:

#### Policy 8.14

"To consider the conversion of rental housing in projects with six or more units to condominium or equity cooperative tenure as premature and not in the public interest unless the rental vacancy rate in the Area Municipality in which the conversion is proposed exceed 2%. Further, no conversion will be allowed which will lower the vacancy rate below 2%".

#### Policy 8.15

"To encourage Area Municipalities to establish appropriate guidelines to evaluate condominium and equity cooperative conversions once the vacancy rate exceeds 2%".

The vacancy rate for apartment projects with six or more units in October 1983, by municipality is shown in Table A.15 in the Appendix. As of October, the apartment vacancy rate in all of the Area Municipalities was less than 2%. The vacancy rate for rental row housing in October 1983, by municipality is shown in Table A.16 in the Appendix. As of October, the row housing vacancy rate in all of the Area Municipalities was also less than 2%. Therefore, no conversions of rental housing with 6 or more units to condominium or equity cooperative tenure will be considered at this time.

#### 7.4 Conclusions - The Rental Housing Sector

Vacancy rates for rental housing have remained low. At the same time, rental rates for apartment units have increased at a higher rate than the general rate of inflation. This indicates that there is likely a demand for additional rental housing. However, at the present time, due to rent review regulations, and the high cost of land, the construction of new apartment buildings remains uneconomical.

There is little the Region can do to encourage new apartment construction; a more than adequate supply of sites for new rental buildings already exists in the Region.

Although rental rates continue to rise, rates in the Region remain relatively inexpensive, particularly when compared to other municipalities in the Province, and the costs of home ownership (Section 5.0).

At the present time, no conversions of rental housing to condominium projects with six or more units will be considered in any of the Area Municipalities in the Region.

## 8.0 ASSISTED HOUSING

The field of assisted housing is complicated due to the variety of agencies and programs involved. All levels of government, as well as a number of private agencies, play a role in the provision of assisted housing.

### 8.1 Inventory of Existing Stock

Table 8.1 shows the number of subsidized housing units provided and administered through a number of existing programs.

The figures in this table include "low market rent" units in the figures listed for the "private non-profit" and "limited dividend" programs. "Low market rent" units are units in which the rent is set at the lower end of rents typically received by similar private open market units in similar areas. Approximately 15% of the limited dividend units, 75% of the senior private non-profit units, and 85% of the family private non-profit units are low market rent units. The remainder of the units are rent geared-to income.

In 1983, there was a net increase of 356 units to the inventory, compared to an increase of 300 units in 1982. Of the 409 units in projects that received funding commitments from Canada Mortgage and Housing Corporation in 1983; 171 were co-operative units for families, 105 were non-profit units for seniors and 133 were non-profit units for families. These new projects will contain both rent geared-to-income and market rent units.

The number of rent geared-to-income units in private non-profit housing projects vary considerably. In addition, since tenant selection is the responsibility of the group sponsoring the project, the rent geared-to income units that are provided may not be assigned to those with the greatest need.

In the next several years, the number of units currently available under the rent supplement program, will be lost as they are reverted back to the private market.

Under the Rent Supplement Program, private landlords are subsidized by the Federal and Provincial Governments to make available rental accommodation to low income families and seniors on a rent-geared-to-income basis. Up to 25% of the units in a project may be designated as Rent Supplement Units. Under the program, the landlord requests funding from the Ministry of Municipal Affairs and Housing for rent supplement units. The landlord will be paid the difference between the reduced rent and the full rent by the Province. This agreement becomes void if the building is sold.

Table 8.1

1983 INVENTORY OF SUBSIDIZED UNITS\*

HAMILTON-WENTWORTH

AS OF DECEMBER 31, 1983

<u>PROGRAM</u>	<u>FAMILIES</u>	<u>SENIORS</u>	<u>HANDICAPPED**</u>	<u>TOTAL</u>
Ontario Housing Corporation	2,000	3,127	36	5,163
Rent Supplement	184	91	128	403
Private Non-Profit	1,326	1,366	0	2,692
Limited Dividend	1,273	0	0	1,273
Co-Operative	668	0	0	668
Municipal Non-Profit	<u>0</u>	<u>30</u>	<u>1</u>	<u>31</u>
TOTAL	5,451	4,614	165	10,230

\*Note: May include units for which funding has been committed but units are unbuilt.

\*\*Note: Due to a definitional change, all units occupied by "handicapped" persons have been included in the handicapped unit figures. However, of the total handicapped units, only 21 of the O.H.C. units and 2 of the rent supplement units are specifically modified for the handicapped.

Source: Ontario Housing Corporation, Hamilton-Wentworth Housing Authority, Canada Mortgage and Housing Corporation, Ministry of Municipal Affairs and Housing and Social Planning and Research Council.

In the mid-seventies, when the vacancy rate was high, landlords used this program to fill their buildings. Now that the vacancy rate is low, landlords can fill their buildings without any problems and are opting out of the program. There are few new buildings where landlords would find it desirable to participate in the program.

In 1983, 53 rent supplement units (28 senior, 22 handicapped and 3 family units) were withdrawn from the rent supplement program.

This loss of rent supplement units is serious since all rent supplement units are rent-geared-to-income compared to 15% (family) to 25% (senior) of the private non-profit units. In addition, the tenants for rent supplement units are drawn from the housing authority's waiting lists, unlike the private non-profit units.

## 8.2 Non-Profit and Co-operative Housing Programs

In 1983, Canada Mortgage and Housing Corporation undertook a review of the Non-Profit and Co-operative Housing Programs\*. The report concludes that although these programs have been effective in providing low market rental accommodations, good quality assisted housing, and housing for special purpose groups, they are not a cost effective means of producing assisted housing and have only had a minimal effect on the need for assistance. This Review will be considered in a future C.M.H.C. evaluation of options for housing assistance programs for the Federal Government. Shelter Allowances may be one option to be considered as a replacement for these present assistance programs. It is expected that this evaluation will result in a document on assisted housing policy recommendations to be submitted to the Federal Government for consideration.

In addition, in 1981, the Provincial Government increased the percentage of rent-geared-to-income units in municipal non-profit projects to 35% from 25%, if the Housing Authority point rating system is used to select tenants. If five percent of the units are available for the handicapped, 40% of the units can be funded as rent geared to income.

## 8.3 Need for Assisted Housing

As shown in Table 8.2, as of December, 1983, there was a total of 876 names on the Hamilton-Wentworth Housing Authority's waiting list for households requesting assisted housing. Although this is a net decrease since 1982, the number of families on the waiting list (721) has remained high.

\*Canada Mortgage and Housing Corporation, Section 56.1  
Non-Profit and Co-operative Housing Program Evaluation

Table 8.2

APPLICANTS ON WAITING LISTS FOR ASSISTED HOUSING

	<u>DECEMBER 1981</u>	<u>DECEMBER 1982</u>	<u>DECEMBER 1983</u>
Seniors	140	140	73
Families	450	720	721
Handicapped	<u>139</u>	<u>109</u>	<u>82</u>
TOTAL	729	969	876

Source: Hamilton-Wentworth Housing Authority

Although the Housing Authority waiting lists are not accurate indicators of need, they do reflect the magnitude of the need for housing assistance.

#### 8.4 Regional Shelter Assistance

In addition to the assisted housing programs, other programs exist to provide funds for shelter assistance. In December 1983, some 3,844 Shelter Shortfall Allowance cheques worth \$223,411, were issued to recipients of General Welfare Allowance by the Regional Department of Social Services. This is an increase of 860 cheques since January 1983. The Shelter Shortfall Allowance cheques provide up to a maximum of \$140 per family, depending on household make-up, rents and heating costs. This sum is subsidized 20% by the Region.

In addition, the Supplementary Shelter Allowance program provides housing funds to recipients of Family Benefit Allowances. The program is administered by the Provincial Ministry of Community and Social Services. The shelter allowances are part of the F.B.A. cheques and vary according to household characteristics, rents paid, and heating costs.

## 8.5 Conclusions - Assisted Housing

It appears that the demand for senior units has been largely met and that the provision of assisted family units must be a priority.

The number of households potentially in need of assistance in the Region is substantial. The large number of families on the Housing Authority's waiting list and the results of the City of Hamilton's housing needs survey indicate a significant demand for assisted units.

The actual and anticipated loss of rent supplement units has and will likely reduce the supply of rent-geared-to-income assisted housing units in the Region.
